

Freedom to connect

Problem

How often do you, your employees or your customers want to use Microsoft Outlook and other business applications, or access documents on a network - when you are at a customer site, traveling, on holiday and other situations where you do not have your laptop with you?

Solution

Now you need only two things:

- internet access and
- a G/On™ USB key

G/On makes it easy to access applications on your network, enabling you to send and receive e-mail, use your company calendar, access documents and spreadsheets, make presentations, and connect to your intranet – while maintaining a high level of security.

Benefits

G/On™ reduces the cost and complexity of securely accessing company IT resources “anywhere, anytime” from virtually any PC. This increases operating efficiency, and ensures maximum convenience as now you don't need to have a corporate PC everywhere you go. G/On makes remote connectivity a valuable business option – not an expensive technical problem. It is easy to manage, saving you time and money, and can help you make your business faster and more flexible.
